## NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 7\_COD\_Question 1

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Ravi is building a basic hash table to manage student roll numbers for quick lookup. He decides to use Linear Probing to handle collisions.

Implement a hash table using linear probing where:

The hash function is: index = roll\_number % table\_sizeOn collision, check subsequent indexes (i+1, i+2, ...) until an empty slot is found.

#### You need to:

Insert a list of n student roll numbers into the hash table. Print the final state of the hash table. If a slot is empty, print -1.

### **Input Format**

The first line of the input contains two integers n and table\_size, where n is the

number of roll numbers to be inserted, and table\_size is the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert into the hash table.

#### **Output Format**

The output should print a single line with table\_size space-separated integers representing the final state of the hash table after all insertions.

If any slot remains unoccupied, it should be represented as -1.

Refer to the sample output for formatting specifications.

# Sample Test Case

```
Input: 4 7
50 700 76 85

Output: 700 50 85 -1 -1 -1 76

Answer

#include <stdio.h>

#define MAX 100

// You are using GCC

void initializeTable(int table[], int table_size) {
    for(int i = 0; i < table_size; i++)
    table[i] = -1;
}

void insertIntoHashTable(int table[], int table_size, int arr[], int n) {
    for(int i = 0; i < n; i++) {
        int index = arr[i] % table_size;
        while(table[index]!=-1) {
            index = (index + 1)%table_size;
        }
```

```
table[index]=arr[i];
                                                        240801113
     void printTable(int table[], int table_size) {
       for(int i = 0; i < table_size; i++)
          printf("%d",table[i]);
       printf("\n");
     }
     int main() {
       int n, table_size;
       scanf("%d %d", &n, &table_size);
int table[MAX];
       for (int i = 0; i < n; i++)
          scanf("%d", &arr[i]);
       initializeTable(table, table_size);
       insertIntoHashTable(table, table_size, arr, n);
       printTable(table, table_size);
        return 0;
     }
                                                                            Marks : 10/10
     Status: Correct
```
